

Peer 2 Peer Chat

This chat is completely different from other chatting software you might be known.
This chat uses Peer 2 peer architecture.

There are still a server involved

The purpose of the server is to track and find other people in the net.

Think of this like this: There are a lot of website in the net, and you catches up with them via one website, like google.

Pros & Cons (from other chats software)

Pros:

Lower delays

Cons:

Need to configure the router and forwarding port (if you connect through router).

Future Updates

- Remote desktop
- File transfer
- Voice over IP
- New design

Author thoughts

I think, when there will be huge amount of addresses in the net (IP-6), the net will be faster.
Port forwarding won't be needed anymore, and a lot of the traffic will become Independent (Peer 2 peer)
